1. App Categories

The apps in the image above are grouped into three types:

- **Free & Fully Usable:** No payment required, fully functional after installation.
- **Free with Limited Features:** Core functions are free; additional features require in-app purchases.
- **Paid or Mod Options:** Premium apps that normally require payment, with optional trial via modded versions (see warnings below).

2. Open Source Apps – Download from My Google Drive

The following AAC apps are open source and can be downloaded directly from this folder:

Download Folder: <https://drive.google.com/drive/folders/1-4AMAQIEtxMWidWuyKwAUFpG3GJJyFUu>

- Cboard
- JABtalk
- Jellow
- LetMeTalk

I will continue to update this folder with newly tested open-source Android AAC apps.

3. Other Apps – Available from Google Play

All other apps shown in the image were available on the Australian **Google Play** Store as of May 2025. Most are free to try, and some offer limited features unless upgraded.

4. Optional Mod Versions (for exploration only)

Some families explore these apps using trial versions found on sites like happymod or a2zapk — use caution, and do not share private data in these versions. If the app is useful, please purchase the official version through Google Play using NDIS funding. We encourage everyone to support developers who build tools that empower disabled communities.

5. Final Words

Humans are social beings. Communication is the bridge that connects hearts and minds — a tool for **breaking isolation, learning, and belonging**.

May every person find a way to be heard.

May every voice be given space to grow.
